

6 things you MUST know when selecting a digital authentication solution.

1. Any technology dependent on a database for online authentication will be breached. Period.
2. Mathematical encryption or algorithms will be brute forced and cracked.
3. Blockchain can also be hacked and/or manipulated.
4. Consumers will not download a specific app to serve a specific purpose.
5. Consumers will never carry a peripheral device with them to authenticate products.
6. Million Eyes Inspector driven by consumer engagement is the best line of defense.
